

SOLUTION OVERVIEW

TURN INSIGHT INTO VALUE

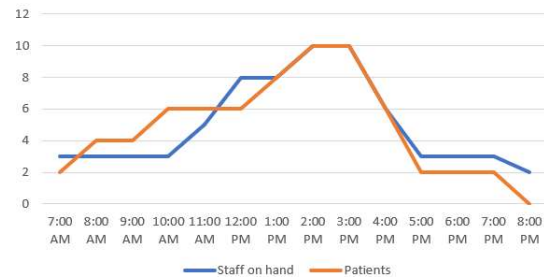

IMPROVE PATIENT SATISFACTION AND YOUR SYSTEM'S FINANCIAL HEALTH

- Do you know your true costs and reimbursement by service line and by procedure (supplies, staffing, time, and overhead)?
- Other than clinical, can you identify the other cost drivers in your risk population?
- Can your teams evaluate current and future interventions/programs for impact on quality and financial outcomes?
- Can you measure cost and effectiveness of care outside the hospital (post-acute care, ambulatory care, and pharmacy)?
- Do you suspect patterns in denials which your Revenue team can improve processes at the authorization, payer, contract, or procedure level to improve reimbursements and reduce write-offs?
- Do you have billions of points of data but little information and no way to share it for collaboration with clinical and operations teams?
- Can you easily capture headcount, financial and other information across the entire organization, not just clinical?

DOES YOUR STAFFING LOOK SOMETHING LIKE THIS:

WHEN IT SHOULD LOOK SOMETHING LIKE THIS:

CRUCIAL TACTICAL QUICK WINS

Whether in the OR, ER, infusion centers, or other resource constrained facilities, now is the time to bring back together the fractioned worlds of specialized departments. Empower your entire team to confidently respond to rapidly shifting patient types and volumes so they can focus on what matters most—clinical outcomes. In a matter of weeks, deliver a technology solution shared across departments to enable your professionals to model staffing plans and supplies that maximize your facility's utilization.

Anaplan is a flexible, best-in-class cloud-based planning and performance management platform. The Keyrus team empowers your team to achieve quick realizable wins today and to drive towards strategic goals for the future.

CONNECTED PLANNING IN ANAPLAN: COLLABORATING TO DRIVE PERFORMANCE

- + Provide better information, reduce redundant reporting tasks and encourage collaboration so teams can reclaim time to focus on patients.
- + Improve employee morale and case management by providing tools to help implement and manage skills-based or flex ratio staffing.
- + Connect demand forecast with supply planning to ensure capacity and supplies are in alignment to support patient needs.
- + In the longer term, proactively optimize point of care and treatment options to best support population health and maximize value drivers.
- + Realize time to value in weeks, not the months or years required with other enterprise planning solutions.
- + Establish a solid foundation for further competitive advantage in the marketplace, by connecting planning, forecasting, and modeling for clinical, financial, operational, administrative, and research functions to make the real-time decisions that matter, precisely when they matter most.

KEY FUNCTIONALITY

- Align demand with capacity planning for staffing and resource management.
- Across all departments, model staffing, supplies, associated costs, revenue, reimbursements, and profitability, all in one place.
- Increase transparency to better manage patient financial outcomes.
- Review profitability at any level of the organization including resource, task, procedure, service, or facility.
- Enable collaboration between departments and service lines.
- User-friendly interactive dashboards to analyze, input, adjust, and model data.
- Integrate clinical, operational, and financial data from existing sources (e.g., EHR, ERP, EPM) as a base for forecasting and modeling, and to work towards improving accuracy.
